

# **WATERJET CUTTING**

**Waterjet cutting** - A cold processing that has low set-up costs, minimal waste and destructive heat generation. Ideal for small to medium-sized series and works for various metals, stones, ceramics, plastics and rubber.

**In addition** - a perfect labor-saving alternative such as pre-processing/rough processing in more complicated productions.

# Waterjet cutting

## LIMO Contract

Today, our contract department works with both punching and water cutting:  
Punching of various rubber and plastic materials such as gaskets, moldings and insulation boards.  
Water cutting with small- and medium-sized series, which works on most hard to medium-soft materials.

## Water cutting for small series

A cold processing that has low set-up costs, minimal waste and no destructive heat generation. Perfect for small and medium-sized series and works for metals, stone, ceramics plastics and rubber.

In addition - a perfect labor-saving alternative such as pre-processing/rough processing in more complicated productions.

## Clean cuts with good precision

The method minimizes the need for finishing touches due to the even cutting surface and without heat generation you also avoid cracking and other metallic changes

We process materials in different thickness and with a maximum cutting surface of 2 x 3m. The tolerance is +/- 0.1mm  
Contact us if you want to know more!

## CAD-support

Through our own CAD department, we have the opportunity to reduce your costs for various intermediaries. The proximity and routine means that we have full control and can be effective at different stages of production.

**We can also help with more advanced CAD drawing and construction - contact us for more information.**

LIMO AB manufactures industrial components and process equipment in small to large series according to our customer's wishes. We have our own mold production and production of metal parts that can be included in the finished end product. Therefor, we can offer a high quality control and advanced material samples to also meet military quality standards.

We are certified according to ISO 9001 and ISO 14001 which guarantees a high quality and a consistent environmental thinking. Our products and knowledge contributes to lower maintenance costs for our customers.

Water cutting and punching are only a small part of our service and product range.
